

# *Three-phase Induction Motors Global Series*

## *Empowering the Future*

Catalog 01-2016

# Cutting-edge Technologies of Toshiba + Mitsubishi Electric = TMEIC

With a combined history of more than 200 years of expertise in industrial machinery production, Toshiba Mitsubishi-Electric Industrial Systems Corporation (TMEIC) is at the forefront when it comes to ensuring the continuous operation of industrial manufacturing worldwide. Our benchmarking motors continually receive high evaluations for their superior reliability, performance, quality, durability, low maintenance and long service life. From metals, paper and materials handling to chemicals, oil and gas, TMEIC motors are truly driving industry.

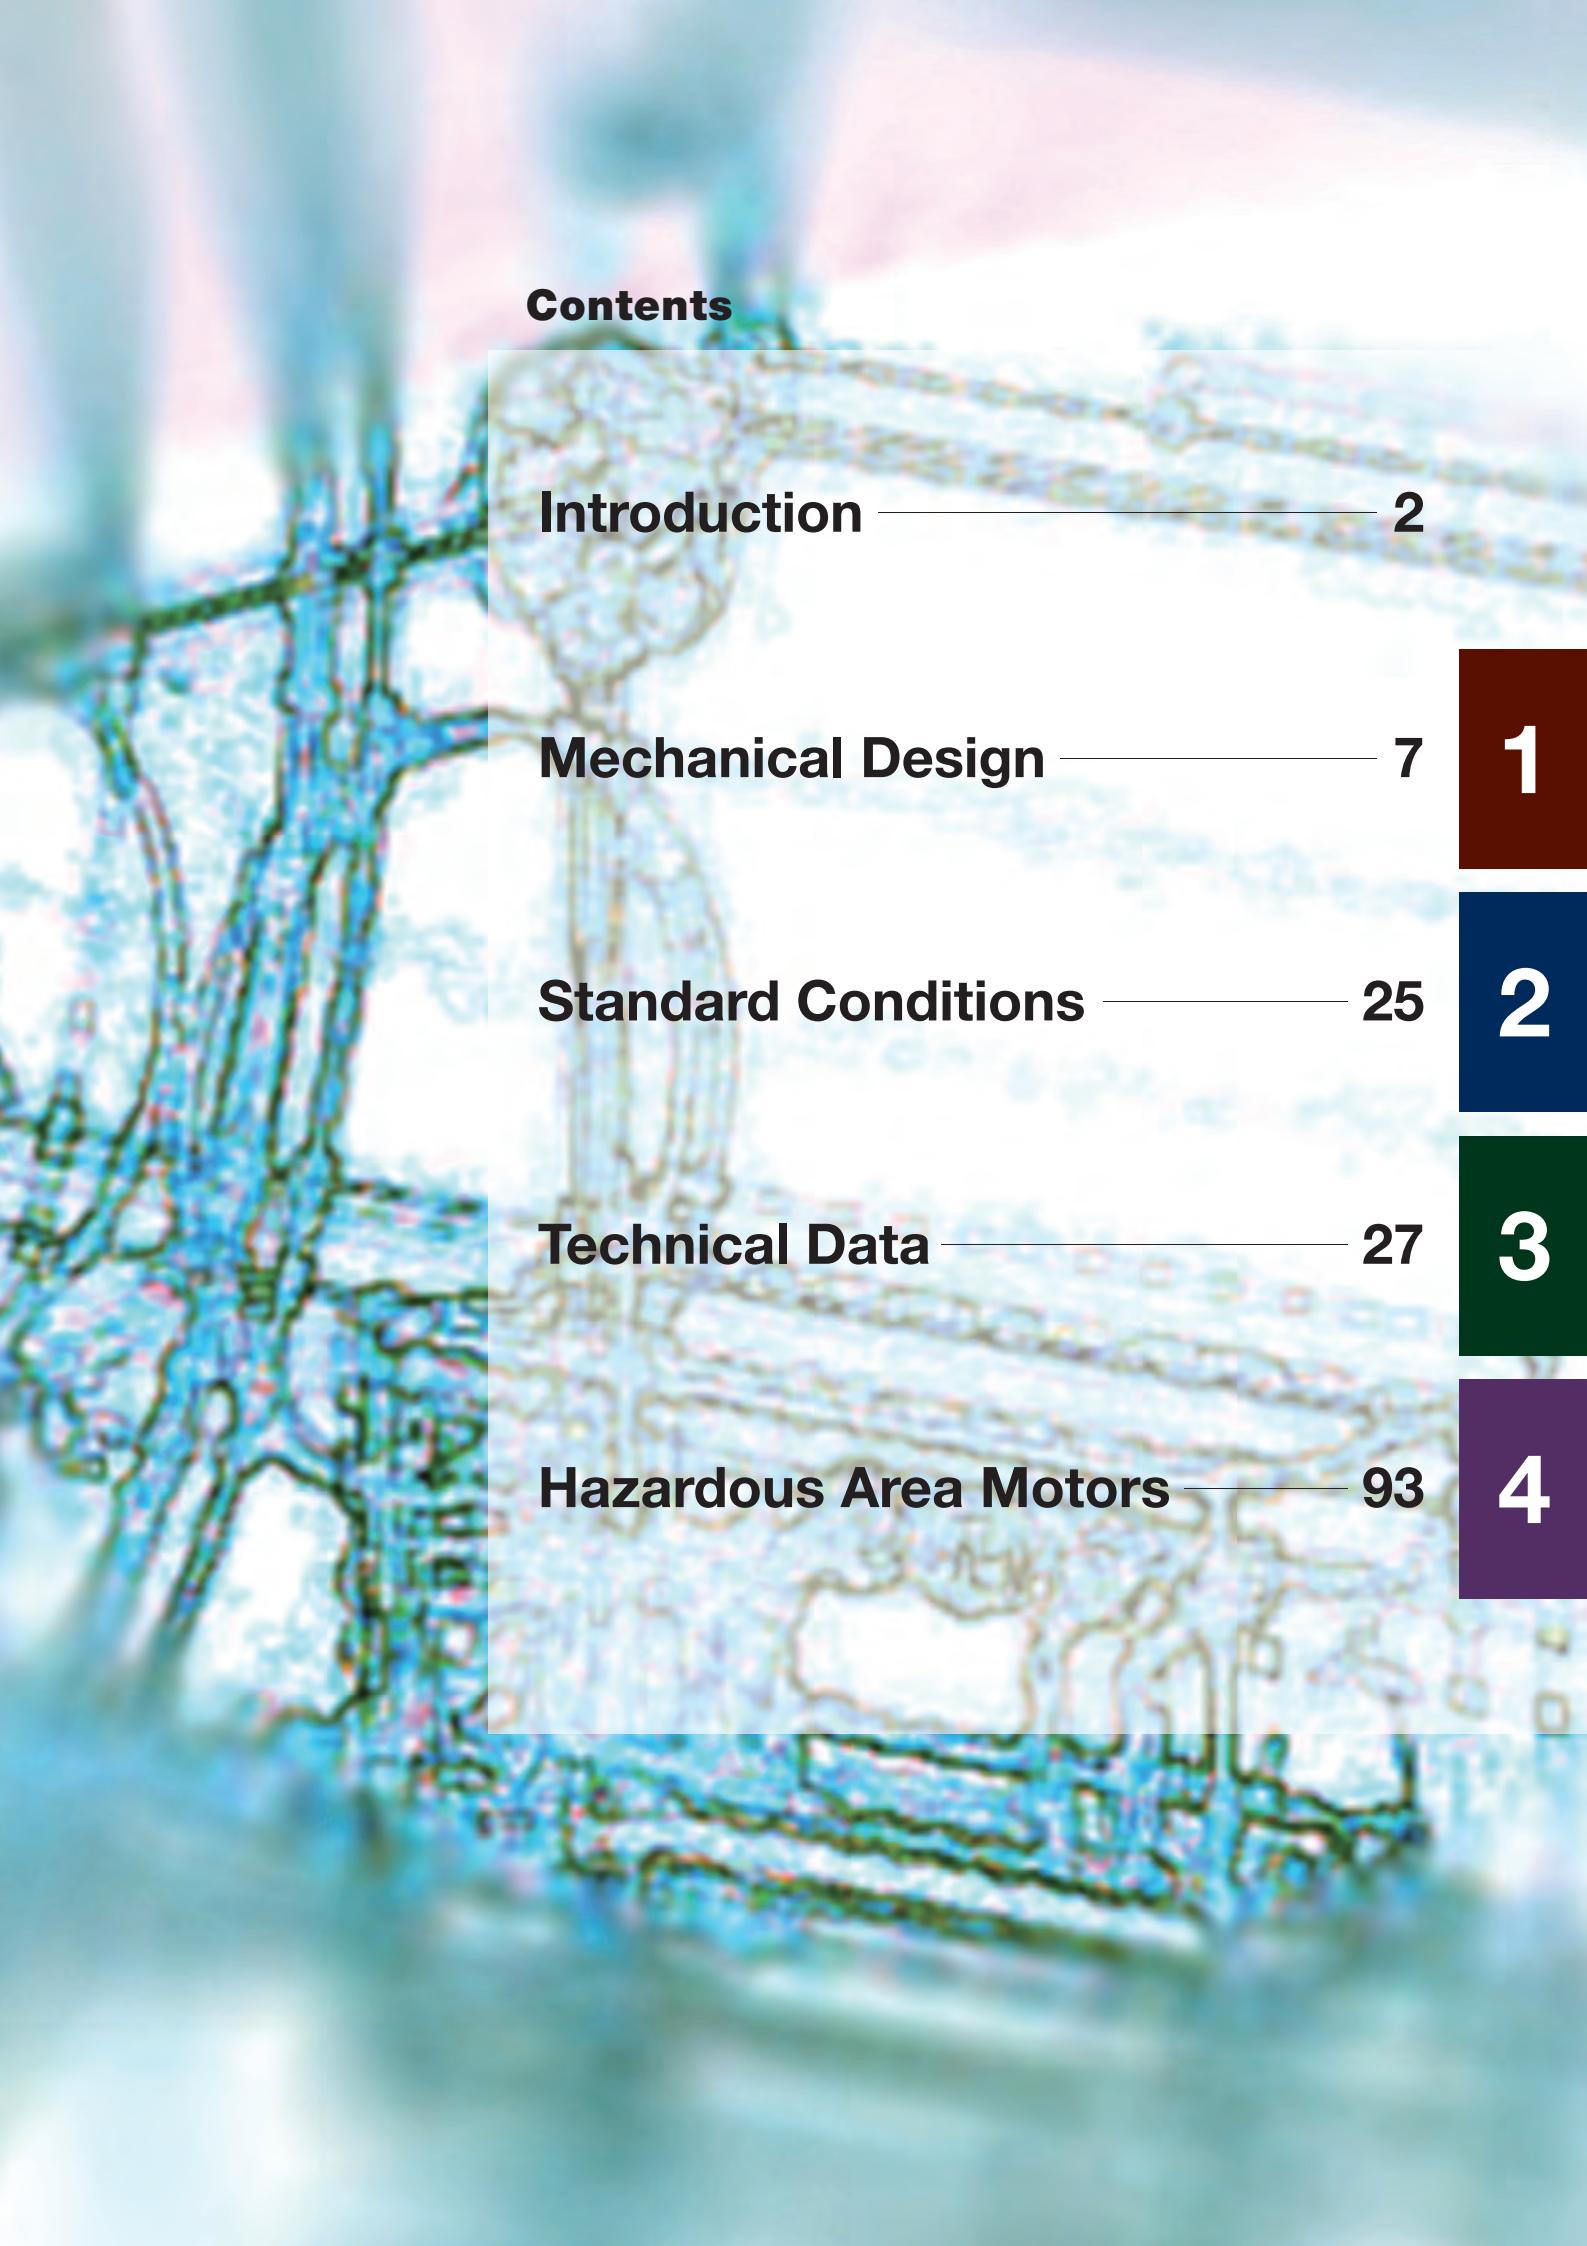

The TM21-G Series is our answer to providing superior reliability, quality and performance for the manufacturing and processing needs of future generations. All motors in this class-leading series have an amazingly small footprint, lightweight construction, are compliant with major international standards and require minimal maintenance. These size, weight and rated performance advantages contribute to ensuring that TMEIC has a motor that matches even the most diversified customer needs.

When it comes to powering industrial manufacturing systems under harsh environmental conditions, you need a motor you can trust at the core. You'll be glad you chose TMEIC.

# Compact, High-performance Motors Built for Future Industrial Manufacturing Needs

*Benchmarking Motors for a New Era*

## Oil & Gas

Ultrahigh-speed, large capacities and flexibility

A long history of reliability and the flexibility to adapt to diverse machinery layouts continue to attract customer praise. As a leading manufacturer, TMEIC proposes optimal drive and motor products, including specially designed ultrahigh-speed motors, and generators.

## Chemicals

Highly reliable, explosion-proof with minimal maintenance requirements

Explosion-proof motors compliant with IEC/ATEX global standards and designed for use in petroleum refineries and petrochemical facilities. Safe and reliable operation is guaranteed, even in potentially dangerous areas where explosive gases could be present.

## Mining

Excellent durability under harsh operating conditions

Motors for mining machinery like grinding mills, mine hoists and conveyors, all with proven durability in harsh operating environments. Whether a large-capacity motor, overhung installation or a motor/variable-frequency drive combination, TMEIC has a best-match product for you.

# Durable, Low-maintenance TM21-G Series Lineup

Owing to compact, lightweight structural configurations, TM21-G Series motors offer enhanced installation flexibility, require less maintenance and can be replaced more easily at the end of service life. A highly durable construction, including explosion-proof models for hazardous environment applications, contributes to ensuring continuous nonstop operation for extended periods of time.

 **Amazingly small footprint**

 **Minimizing weight**

 **Compliance to International Standards**

 **Minimal maintenance required**

 **Exceptional reliability**

Metals

Robust operation in severe environments

Motors designed to withstand heat, steam, dust and other particulates, as well as impact force when operating in severe environments. When it comes to supplying reliable products and flexible solutions, TMEIC has an excellent record of customer satisfaction.

Paper

Compact in size with high-precision control

Compact, highly efficient motors compliant with international standards. Fin frame sizes up to 560 enable use where installation space is limited, while easy grease removal and bearing maintenance contribute to a long service life.

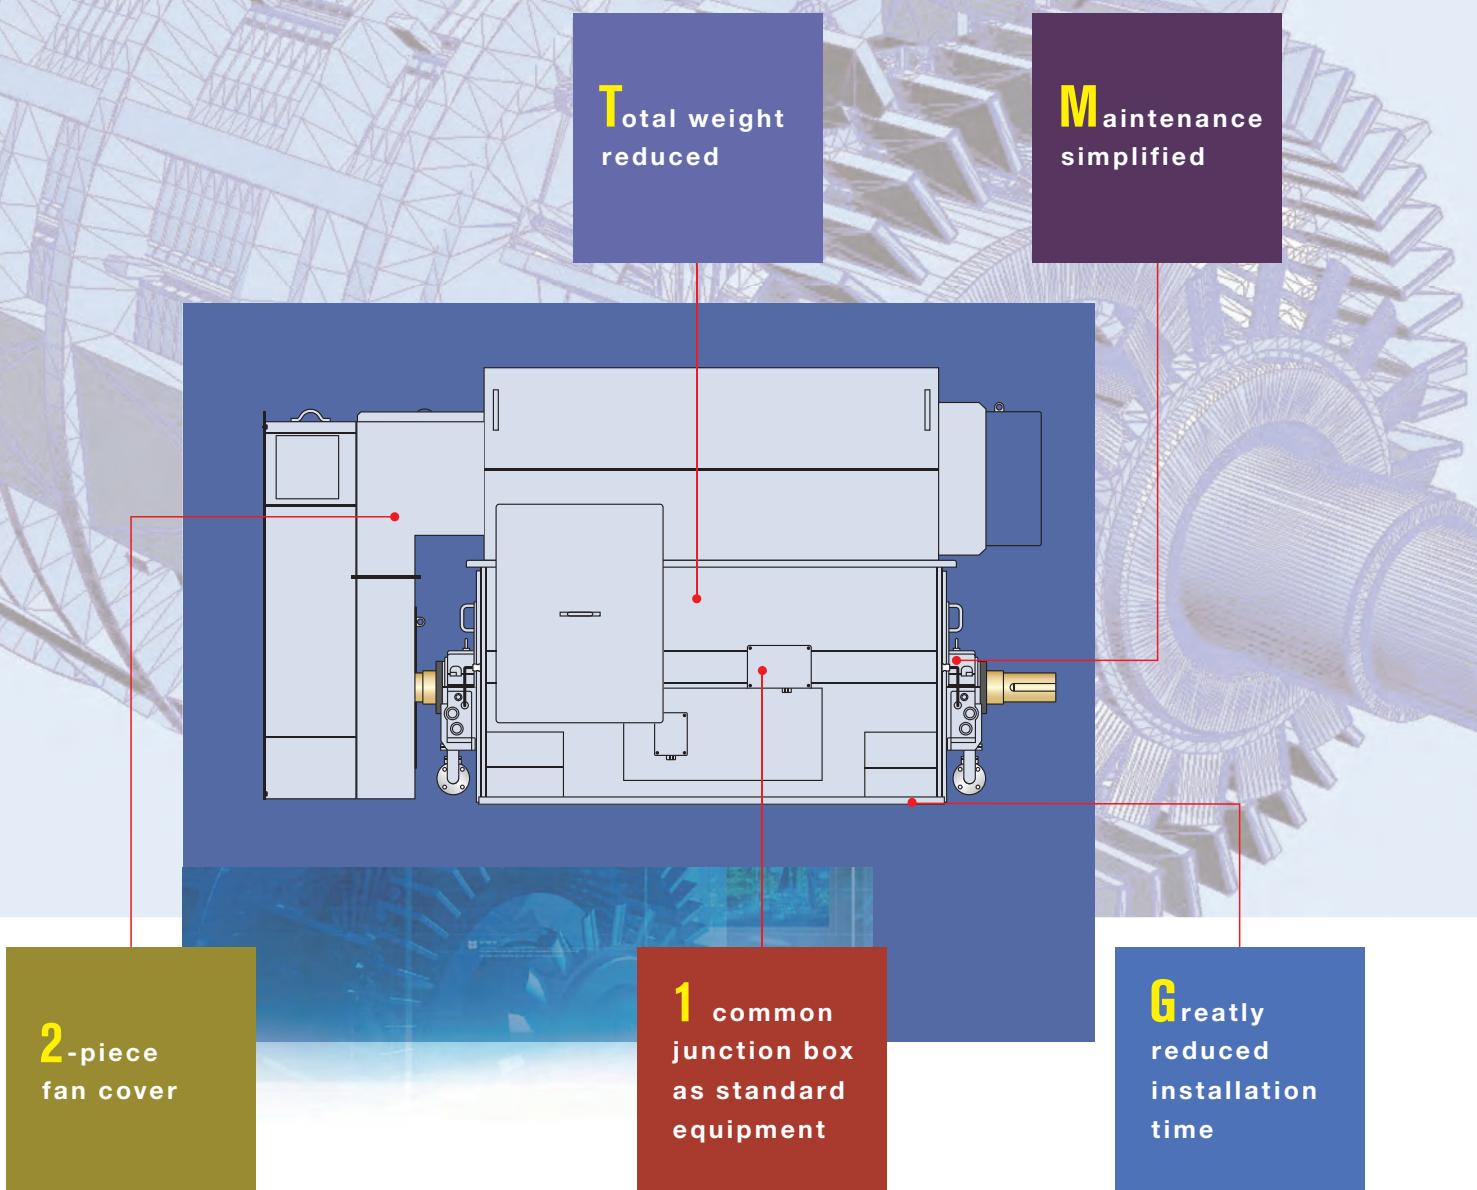

Water Treatment

High quality and long-term stability

Motors utilized in water-supply and sewerage systems include those in water-treatment pumps and blowers, and flood-control pumps among other applications. These motors start, stop and run at variable speeds according to daily load requirements. Highly evaluated for their high quality and long-term stable operation, TMEIC motors are contributing to the stable operation of social infrastructures.

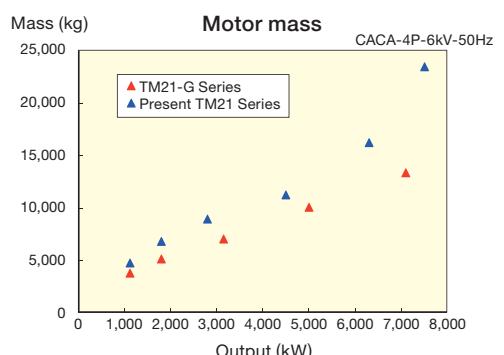

# Designed with Industrial-use in Mind

## Lightweight motors

### World-class Lightweight Design

The optimal design of these world-class motors has realized a 20–30% weight reduction compared to our previous motor series. This contributes to various benefits including reduced shipping cost, lower foundation load/crane capacity and simplified maintenance.

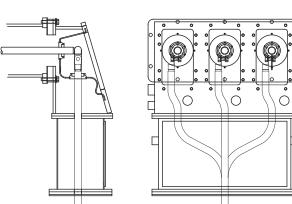

## Main circuit terminal box

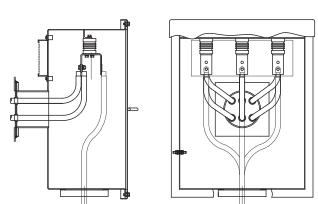

### Choice of Terminal Boxes

A variety of terminal boxes are available as standard equipment in response to market demand. Choices include a standard terminal box, a phase-segregated terminal box and a large, a terminal box with large double terminals compliant with NEMA standards.

Phase-segregated terminal box

Standard terminal box

# T

## Motor Materials, Shipping & Manufacturing Costs Reduced

### Lighter motor introduced, enabling...

- Reduction in motor, shipping and foundation costs
- Reduction in installation work

# M

## Exceptionally Low Maintenance Cost

- Replace sleeve bearing metal without disassembling motor

### Antifriction bearings used throughout, enabling...

- Easy access to backup bearings required for periodic replacement
- Low-cost maintenance

# 2

## Maintenance So Easy Anyone Can Do It

### Two-piece fan cover introduced, enabling...

- Removal of heat exchanger without disassembly
- Easy maintenance

# 1

## Installation and Replacement Work Reduced

### Instrument cables connected in one junction box, enabling...

- Separate cable connections to be gathered in one spot
- Substantial reduction in installation and replacement work

# G

## Shorter SDM Time Realized

### A shorter total motor length is introduced, enabling...

- Installation in narrow spaces
- Reduction in time required for installation and alignment
- Reduction in time required for shutdown maintenance (SDM) during overhauls

### Junction box

## Cable Connection Work Simplified

Instrument cables are routed into a single junction box and the incorporation of clamp-type terminals as standard simplifies the cable connection process. As a result, external cable connection work is simplified reducing installation times. Furthermore, the junction box is made of stainless steel, increasing operating durability under harsh conditions.

### Cable duct

## Replacement So Easy a Novice Can Do It

Instrument and space heater cables pass through an IP55 cable duct that is hermetically sealed using steel plates. This helps to ensure motor operation even in harsh environments. Additionally the iron piping and armored cables required when running cables alongside the motor surface have been eliminated. As a result, less time and effort are required when replacing instruments, and it's so easy virtually anyone can do it.

# Nothing Quite Like It— Experience a TM21-G

**TEFC (IC411)**

Rated voltage	Up to 6.6kV
Rated speed	Up to 3,600rpm (Applicable for VVVF drive)
Number of poles	2P–8P
Enclosure	IP55
Mounting method	IMB3 (Horizontal)
Shaft height	Up to 560mm

**WP II (IC01), TEAAC (IC611), TEWAC (IC81W)**

Rated voltage	Up to 11kV	
Rated speed	Up to 3,600rpm (Applicable for VVVF drive)	
Number of poles	2P–14P	
Enclosure	WP II	IP24W
	TEAAC	IP55 (IP56)
	TEWAC	IP55 (IP56)
Mounting method	IMB3 (Horizontal), IMV1 (Vertical)	
Shaft height	Up to 900mm	

## Features

**High Reliability** resulting from use of proven design technology, manufacturing expertise, wide use of robotics, tight quality control and testing

**High Efficiency** resulting from detailed analysis of the electromagnetic field patterns and ventilating air flows

**High Strength Insulation** through the use of robotic insulation winding and use of an oversized epoxy resin vacuum impregnation tank for creating strong support and insulation

**High Mechanical Strength** through use of static and dynamic strength analysis of stator frame, rotor, shaft and bearings. Motor shafts are made of forged steel with high tensile strength.

## Benefits

Many years of excellent trouble-free service under difficult working conditions

Low electrical losses and high power conversion

Withstands surge and minimizes electrical shorts and winding failure

Minimizes mechanical deflection and vibration

## Enclosure and Cooling

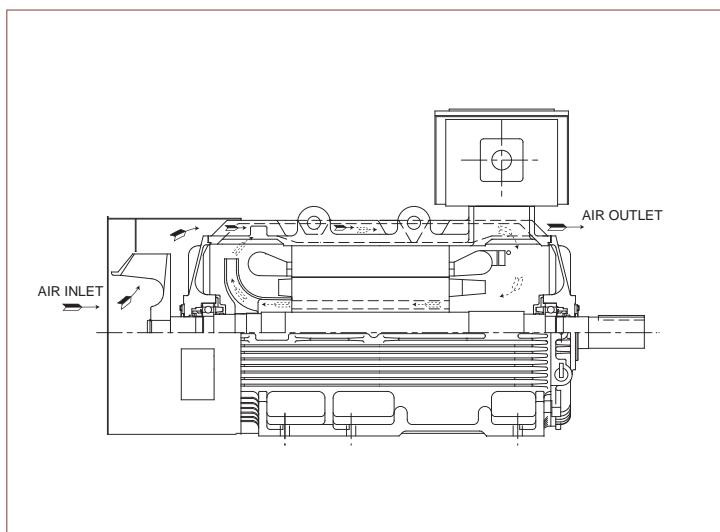

### Totally Enclosed Fan Cooling System

#### Classifications: IC411, IP55

TMEIC motors equipped with totally enclosed fan cooling systems are designed to comply with IC411 and IP55 classifications. The fan is mounted on the rotor and enclosed in the case so that the cooling-air flow is directed over the surface of the motor. Enclosure with IP55 classification are designed to prevent dust infiltration, thereby prohibiting particulates from reaching the motor and ensuring smooth, continuous operation. They are also designed so that water sprayed onto the frame from any direction is prevented from permeating and causing any harmful effect. Applicable frame sizes: Fr.315 to Fr.560.

1

#### ■ Fr.315 to Fr.560

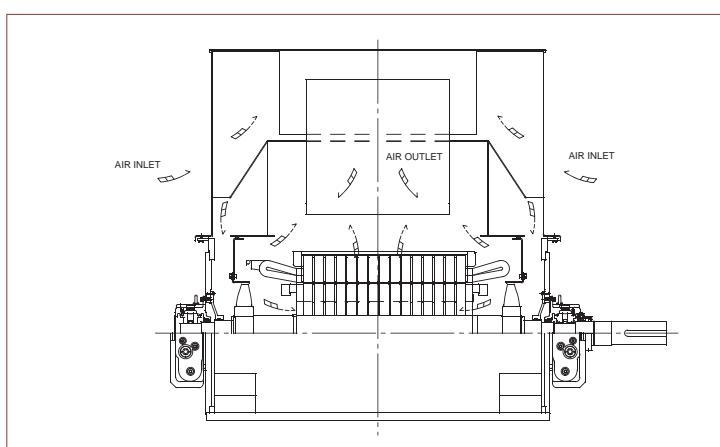

### Weather-protected Type II Cooling System

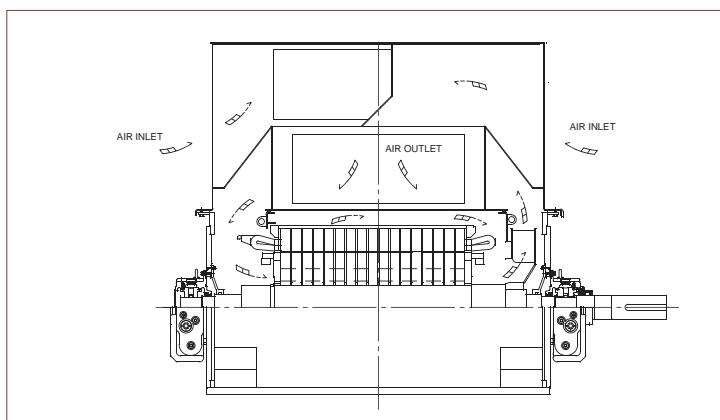

#### Classifications: IC01, IP24W

TMEIC motors equipped with weather-protected type II (WP II) cooling systems are classified as IP24 and IC01 under IEC standards. The ventilation passages in these motors are protected so that rain, snow and air-borne particles cannot permeate electrical components. Both the intake and exhaust ventilation passages are designed with at least three 90-degree elbows in the direction of airflow, and the airflow speed in the low-velocity area in the intake-air path does not exceed 600ft/min.

#### ■ Two-sided ventilation for 2 and 4 poles

#### ■ One-sided ventilation for 6 poles or more

# Mechanical Design

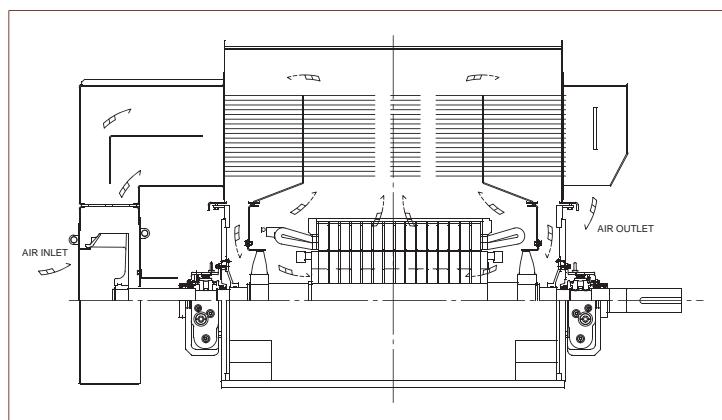

## Enclosure and Cooling

### Totally Enclosed Air-to-air Cooling System

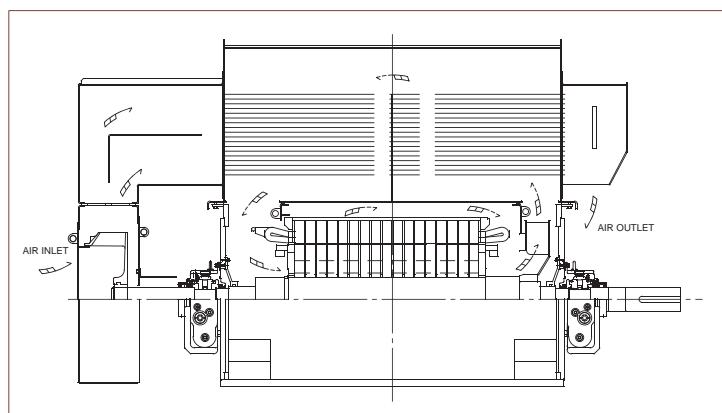

#### Classifications: IC611, IP55

TMEIC motors equipped with totally enclosed air-to-air cooling systems are classified as IC611 and IP55 under IEC standards. These motors are cooled through a heat-exchanging process that utilizes internal air circulated through the heat exchanger. Both air re-circulated through the motor and external air drawn in are circulated by the fan mounted on the motor shaft and driven by the rotor. The minimum applicable frame size is 315-1000, and the standard cooling tube material is either corrosion-resistant treated carbon steel or stainless steel. Machines in the IP55 classification are designed to prevent the permeation of dust that could interfere with proper operation of the machinery. They are also built so that water sprayed onto the motor from any direction has no harmful effect.

#### ■ Two-sided ventilation for 2 and 4 poles

#### ■ One-sided ventilation for 6 poles or more

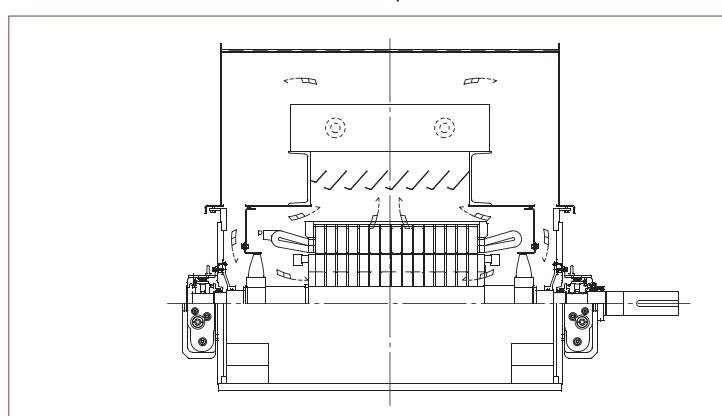

### Totally Enclosed Water-to-air Cooling System

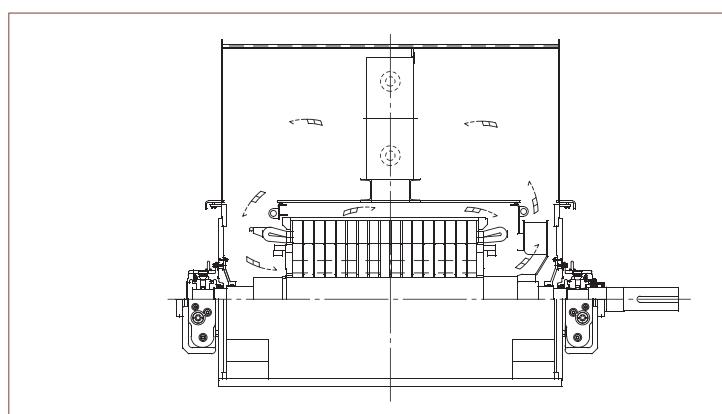

#### Classifications: IC81W, IP55

TMEIC motors equipped with totally enclosed water-to-air cooling systems are classified as IC81W and IP55 under IEC standards. These motors are cooled through a heat-exchanging process that utilizes internal air circulated through a heat exchanger that is cooled by fresh water. The internal air is circulated by a fan mounted on the motor shaft. The minimal applicable frame size is 315-1000, and the standard cooling tube material is de-oxidized copper tubing (a single tube). Machines in the IP55 classification are designed to prevent the permeation of dust that could interfere with proper operation of the machinery. They are also built so that water sprayed onto the motor from any direction has no harmful effect.

#### ■ Two-sided ventilation for 2 and 4 poles

#### ■ One-sided ventilation for 6 poles or more

All ratings in this catalogue are designed for the following:

- Installation altitude of the motor  $\leq 1000\text{m}$  above sea level
- Ambient temperature (= coolant temperature for air-cooled motors) =  $40^\circ\text{C}$
- Cooling water temperature for water-cooled motors =  $25^\circ\text{C}$
- Thermal class 155 (F) utilized to 130 (B)
- Continuous operation S1
- Permissible tolerances in compliance with IEC/EN 60034-1:
  - Rated voltage  $V_{\text{rated}} \pm 5\%$
  - Rated frequency  $f_{\text{rated}} \pm 2\%$
- All data presented in this catalog are typical values.  
Guaranteed values are available on request.  
All motors are optimized for the specified application.  
Accurate motor data will be given on request at quotation phase.  
Legally binding performance and specification data is given to the end user once each order is confirmed.
- With the value specified in the selection and ordering data for the maximum permissible external moment of inertia, start-up is possible two times from cold or one time from warm, assuming that the motor coasts down naturally between starts.
- Please provide load data and starting requirements to TMEIC for final design confirmation.
- Specification data and main dimensions not presented in this catalog will be given on request at quotation phase.

# Technical Data

## IC01·IP24W (WP II – Weather-Protected Type II)

Air-cooled motors

### ■ Technical data

#### IC01·IP24W (WP II)

Rated voltage	2.3kV and 4.16kV
Rated frequency	60Hz
Motor type	Induction motor with squirrel-cage rotor
Type of construction	IM B3/IM V1
Degree of protection	IP24W
Cooling method	IC01
Stator winding insulation	Thermal class 155 (F), utilized to 130 (B)
Shaft height	400 to 630mm
Bearings	Antifriction bearings, sleeve bearings
Cage material	Copper
Frame design for shaft heights 400 to 630mm	Frame: Steel Top cover: Steel
Standards	IEC, NEMA, JEC

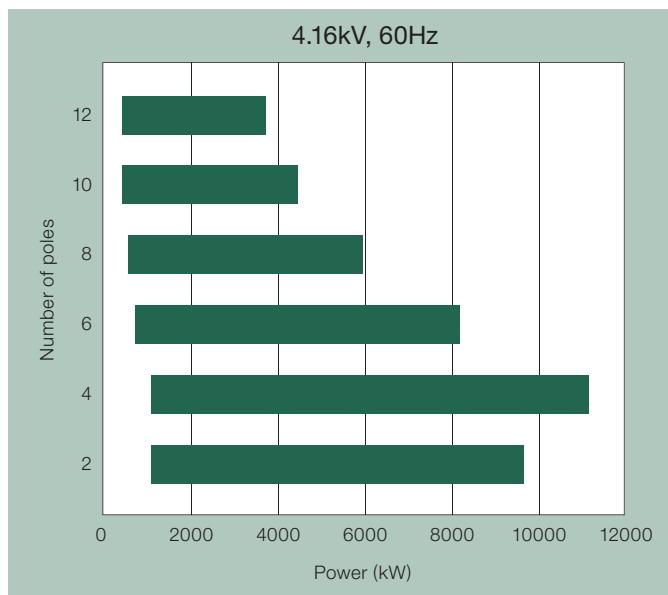

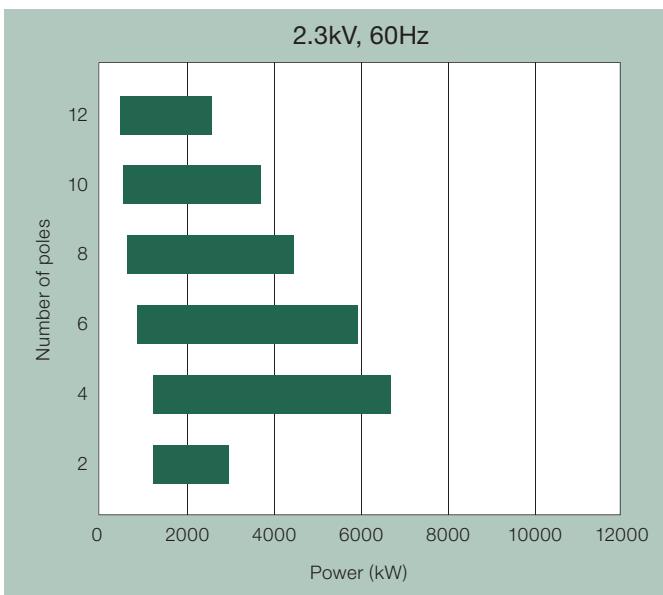

### ■ Power range – Shaft height: 400 to 630mm

Insulation system, thermal class: 155 (F), utilized to 130 (B).

Ambient temperature: up to 40°C

Installation altitude: up to 1000m

# Technical Data

## IC611 (TEAAC – Totally Enclosed Air-to-Air-Cooled)

Air-cooled motors

### ■ Technical data

#### IC611 (TEAAC)

Rated voltage	Up to 11.0kV
Rated frequency	50/60Hz
Motor type	Induction motor with squirrel-cage rotor
Type of construction	IM B3/IM V1
Degree of protection	IP55
Cooling method	IC611
Stator winding insulation	Thermal class 155 (F), utilized to 130 (B)
Shaft height	400 to 630mm
Bearings	Antifriction bearings, sleeve bearings
Cage material	Copper
Frame design for shaft heights 400 to 630mm	Frame: Steel Top cover: Steel
Tube material for air cooler	Aluminum/Stainless as option
Standards	IEC, NEMA, JEC

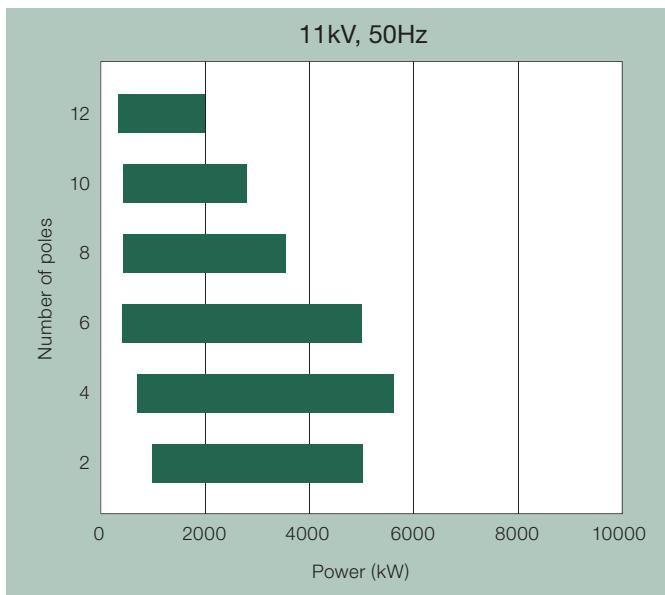

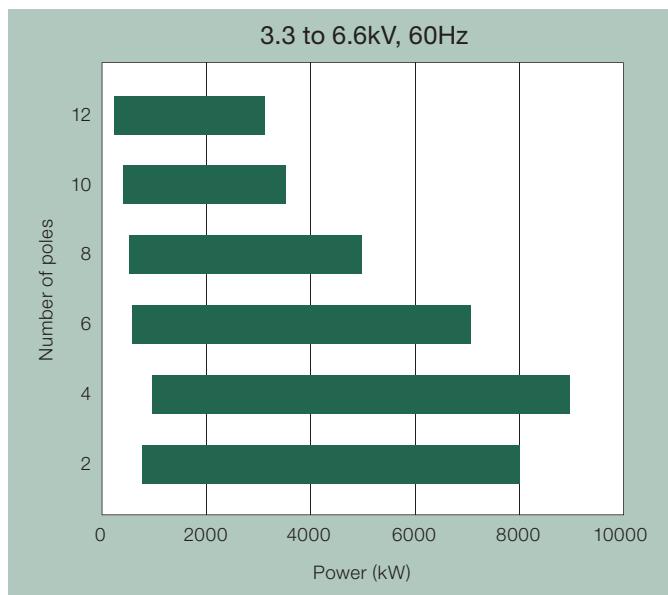

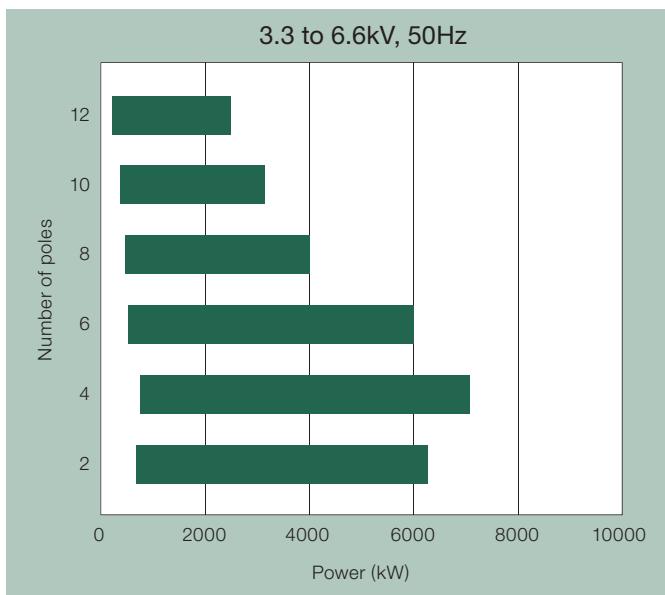

### ■ Power range – Shaft height: 400 to 630mm

Insulation system, thermal class: 155 (F), utilized to 130 (B).

Ambient temperature: up to 40°C

Installation altitude: up to 1000m

# Technical Data

## IC81W (TEWAC) – Totally Enclosed Water-to-Air-Cooled

Water-cooled motors

### ■ Technical data

#### IC81W (TEWAC)

Rated voltage	Up to 11.0kV
Rated frequency	50/60Hz
Motor type	Induction motor with squirrel-cage rotor
Type of construction	IM B3/IM V1
Degree of protection	IP55
Cooling method	IC81W
Stator winding insulation	Thermal class 155 (F), utilized to 130 (B)
Shaft height	400 to 630mm
Bearings	Antifriction bearings, sleeve bearings
Cage material	Copper
Frame design for shaft heights 400 to 630mm	Frame: Steel Top cover: Steel
Tube material for water cooler	Deoxidized copper
Standards	IEC, NEMA, JEC

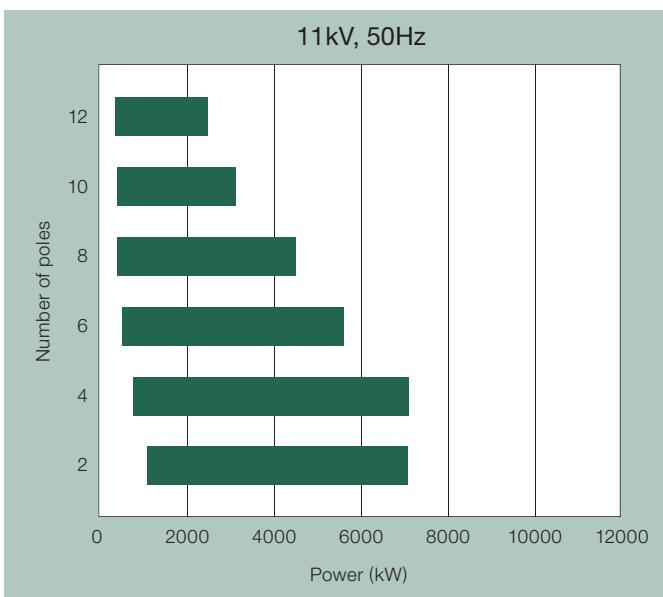

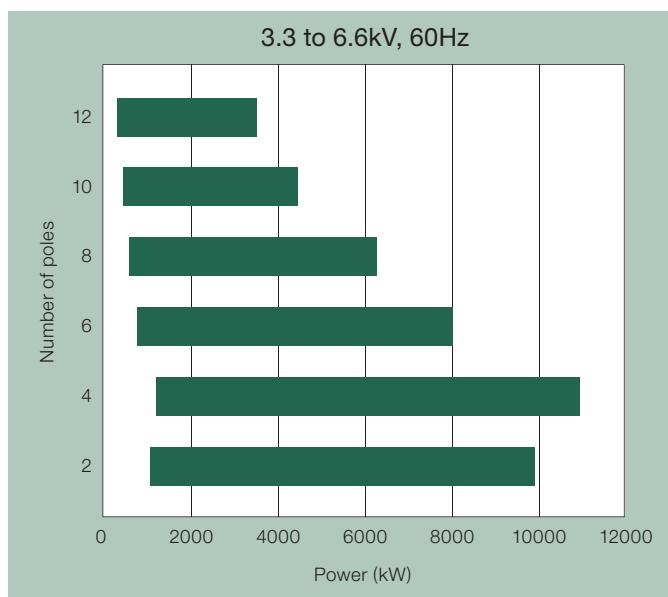

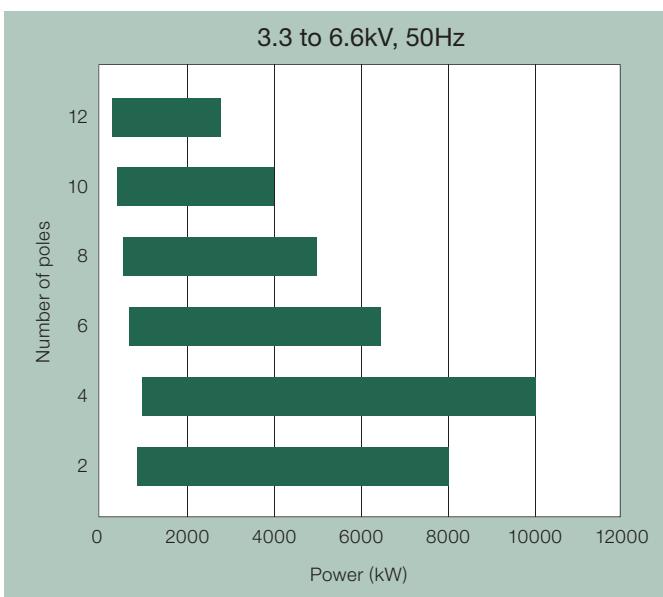

### ■ Power range – Shaft height: 400 to 630mm

Insulation system, thermal class: 155 (F), utilized to 130 (B).

Coolant temperature: up to 25°C

Installation altitude: up to 1000m

# Hazardous Area Motors

## General

To ensure maximum safety, most countries have passed legislation and implemented regulations and laws based on national and international standards. TMEIC motors are certified for operation in hazardous areas in most regions around the world.

### ■ Global Protection and Certification

	Standard	Certification Body
<b>Europe</b>	EN & ATEX	<b>Baseefa</b>
<b>Russia</b>	IEC or GOST	<b>Nanio CCVE</b>
<b>China</b>	GB	<b>CQST or NEPST</b>
<b>Korea</b>	IEC	<b>KOSHA or KGS</b>
<b>Australia</b>	IEC	<b>Baseefa</b>
<b>India</b>	IEC or EN & ATEX	<b>CCOE</b>
<b>USA</b>	NEC & ISA	<b>FM</b>
<b>Canada</b>	CSA	<b>CSA</b>
<b>Brazil</b>	ABNT & IEC	<b>CEPEL or NCC</b>
<b>Others</b>	IEC or EN & ATEX	<b>Baseefa</b>

Hazardous area motors are categorized according to the zone, type of protection and frame size. The table above shows the certifications that TMEIC has received from various authoritative bodies, in many cases the certifications apply to both constant and variable-speed motors.

### ■ Classification of Hazardous Area

#### Zone definition according to EN 60079-10-1/IEC 60079-10-1 and EN 60079-10-2/IEC 60079-10-2

<b>Zone 0</b>	Area in which an explosive gas atmosphere is present continuously or for long periods or frequently
<b>Zone 1</b>	Area in which an explosive gas atmosphere is likely to occur in normal operation occasionally
<b>Zone 2</b>	Area in which an explosive gas atmosphere is not likely to occur in normal operation but, if it does occur, will persist for a short period only
<b>Zone 22</b>	Area in which an explosive atmosphere in the form of a cloud of combustible dust in air is not likely to occur in normal operation but, if it does occur, will persist for a short period only

Potentially explosive atmospheres are divided into zones based on the chronological and geographical probability of the presence of a hazard. Information and specifications regarding zone subdivision for gas atmospheres can be found in EN 60079-10-1/IEC 60079-10-1, and that for potentially explosive dust atmospheres can be found in EN 60079-10-2/IEC 60079-10-2. Further, a distinction is made between various explosion groups and temperature classes, and these are included in the hazard assessment.

### ■ Types of Explosion-protected Machines

#### Type of protection and prevention

<b>Exn</b>		<b>Non-sparking in accordance with EN 60079-15/IEC 60079-15</b> Machines not capable of igniting a surrounding explosive atmosphere during normal operation. Applicable zones: Zone 2
<b>Exe</b>		<b>Increased safety in accordance with EN 60079-7/IEC 60079-7</b> Machines that do not emit dangerous sparks or temperatures when starting or during normal operation. Special additional safety measures are taken. Applicable zones: Zone 1 and 2
<b>Exp</b>		<b>Pressurized in accordance with EN 60079-2/IEC 60079-2</b> Explosive gases that may result in fire are prevented from permeating inside the machine. Applicable zones: Zone 1 and 2
<b>Exd</b>		<b>Flameproof enclosure in accordance with EN 60079-1/IEC 60079-1</b> Machines constructed to contain an internal explosion and prevent the transmission of flame to the external atmosphere. Operating temperature is such that it cannot ignite any surrounding gases. Applicable zones: Zone 1 and 2
<b>Extc</b>		<b>Enclosure in accordance with EN 60079-31/IEC 60079-31</b> Machines enclosed for the purpose of protecting electrical equipment. The surface temperature is limited to enable use in areas where combustible dust may be present in concentrated levels that could cause a fire or explosion. Applicable zones: Zone 22

Depending on the zone and associated hazard, operating equipment must comply with defined minimum protection requirements. The various types of protection require that motors be subjected to appropriate measures that will prevent them from igniting the surrounding potentially explosive atmosphere.

# Hazardous Area Motors

## Type of Protection Exn

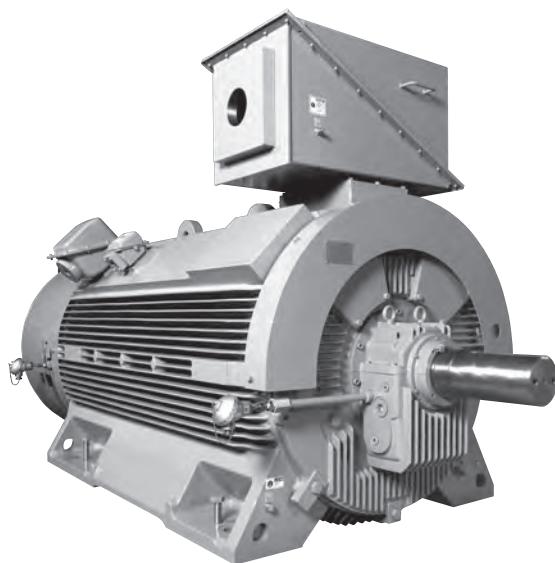

### IC411 (TEFC – Totally Enclosed Fan-Cooled)

Air-cooled motors

#### ■ Technical data

##### IC411 (TEFC), Exn

Rated voltage	up to 6.6kV
Rated frequency	50/60Hz
Motor type	Induction motor with squirrel-cage rotor
Type of construction	IM B3/IM V1
Degree of protection	IP55
Type of protection	Exn
Hazardous area classification	Zone 2
Cooling method	IC411/IC416
Stator winding insulation	Thermal class 155 (F), utilized to 130 (B)
Shaft height	315 to 560mm
Bearings	Antifriction
Cage material	Aluminum/Copper
Frame material	Cast iron
Standards	IEC, EN, JEC

# Hazardous Area Motors

## Type of Protection Exn

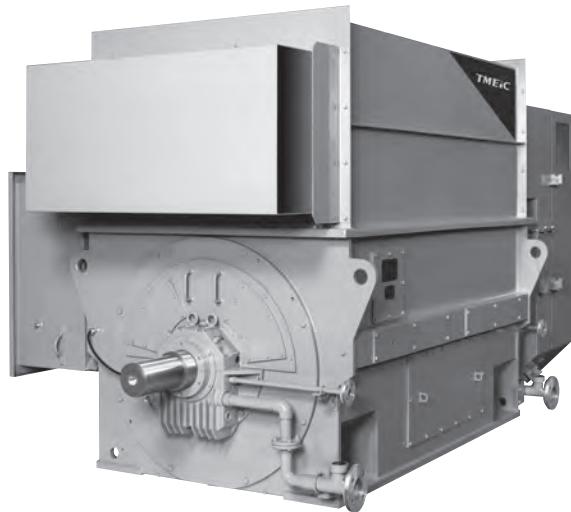

### IC611 (TEAAC – Totally Enclosed Air-to-Air-Cooled)

Air-cooled motors

#### ■ Technical data

##### IC611 (TEAAC), Exn

Rated voltage	up to 11kV
Rated frequency	50/60Hz
Motor type	Induction motor with squirrel-cage rotor
Type of construction	IM B3/IM V1
Degree of protection	IP55
Type of protection	Exn
Hazardous area classification	Zone 2
Cooling method	IC611
Stator winding insulation	Thermal class 155 (F), utilized to 130 (B)
Shaft height	400 to 630mm
Bearings	Antifriction/Sleeve
Cage material	Copper
Frame material for shaft height 400 to 630mm	Frame: Steel Top cover: Steel
Tube material for air cooler	Aluminum/Stainless as option
Standards	IEC, EN, JEC

These Exn measures do not affect the performance data or main dimensions of the TMEIC standard non-hazardous area motors in this catalog.

Therefore the data of the non-hazardous area motors from Chapter 3 can also be used for these Exn motors.

# Hazardous Area Motors

## Type of Protection Exn

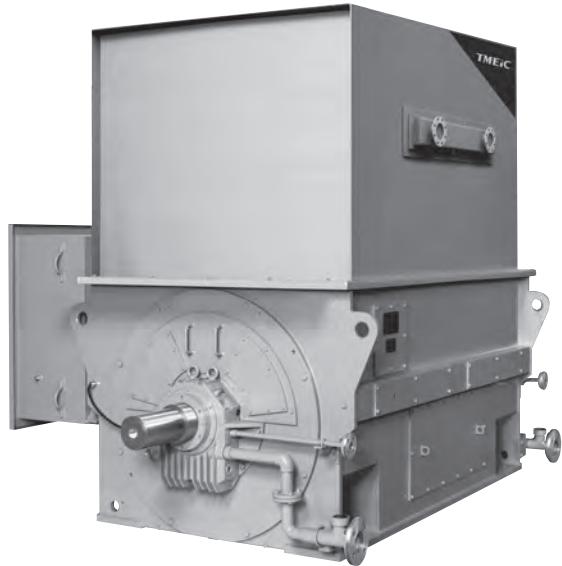

### IC81W (TEWAC – Totally Enclosed Water-to-Air-Cooled)

Water-cooled motors

#### ■ Technical data

##### IC81W (TEWAC), Exn

Rated voltage	up to 11kV
Rated frequency	50/60Hz
Motor type	Induction motor with squirrel-cage rotor
Type of construction	IM B3/IM V1
Degree of protection	IP55
Type of protection	Exn
Hazardous area classification	Zone 2
Cooling method	IC81W
Stator winding insulation	Thermal class 155 (F), utilized to 130 (B)
Shaft height	400 to 630mm
Bearings	Antifriction/Sleeve
Cage material	Copper
Frame material for shaft height 400 to 630mm	Frame: Steel Top cover: Steel
Tube material for air cooler	Deoxidized copper
Standards	IEC, EN, JEC

These Exn measures do not affect the performance data or main dimensions of the TMEIC standard non-hazardous area motors in this catalog.

Therefore the data of the non-hazardous area motors from Chapter 3 can also be used for these Exn motors.

# Hazardous Area Motors

## Type of Protection Exe

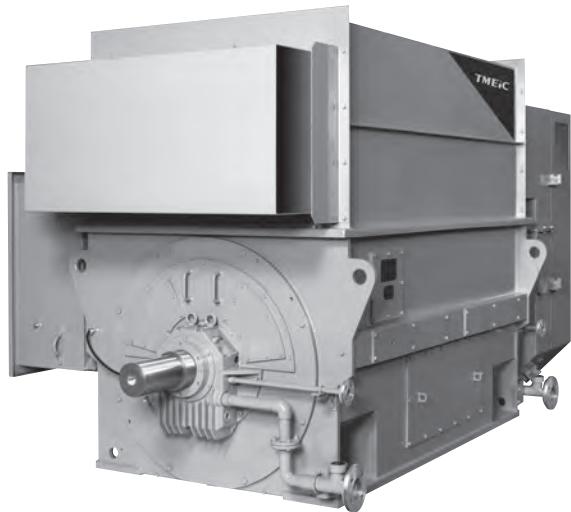

### IC611 (TEAAC – Totally Enclosed Air-to-Air-Cooled)

Air-cooled motors

#### ■ Technical data

##### IC611 (TEAAC), Exe

Rated voltage	up to 11kV
Rated frequency	50/60Hz
Motor type	Induction motor with squirrel-cage rotor
Type of construction	IM B3/IM V1
Degree of protection	IP55
Type of protection	Exe
Hazardous area classification	Zone 1, 2
Cooling method	IC611
Stator winding insulation	Thermal class 155 (F), utilized to 130 (B)
Shaft height	400 to 630mm
Bearings	Antifriction/Sleeve
Cage material	Copper
Frame material for shaft height 400 to 630mm	Frame: Steel Top cover: Steel
Tube material for air cooler	Aluminum/Stainless as option
Standards	IEC, EN, JEC

# Hazardous Area Motors

## Type of Protection Exe

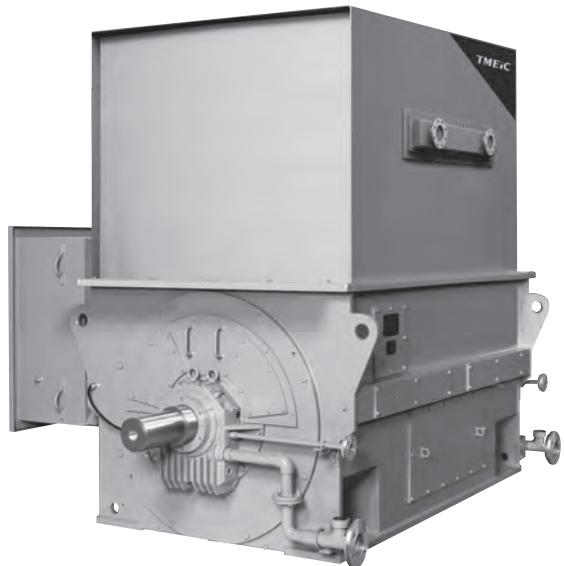

### IC81W (TEWAC – Totally Enclosed Water-to-Air-Cooled)

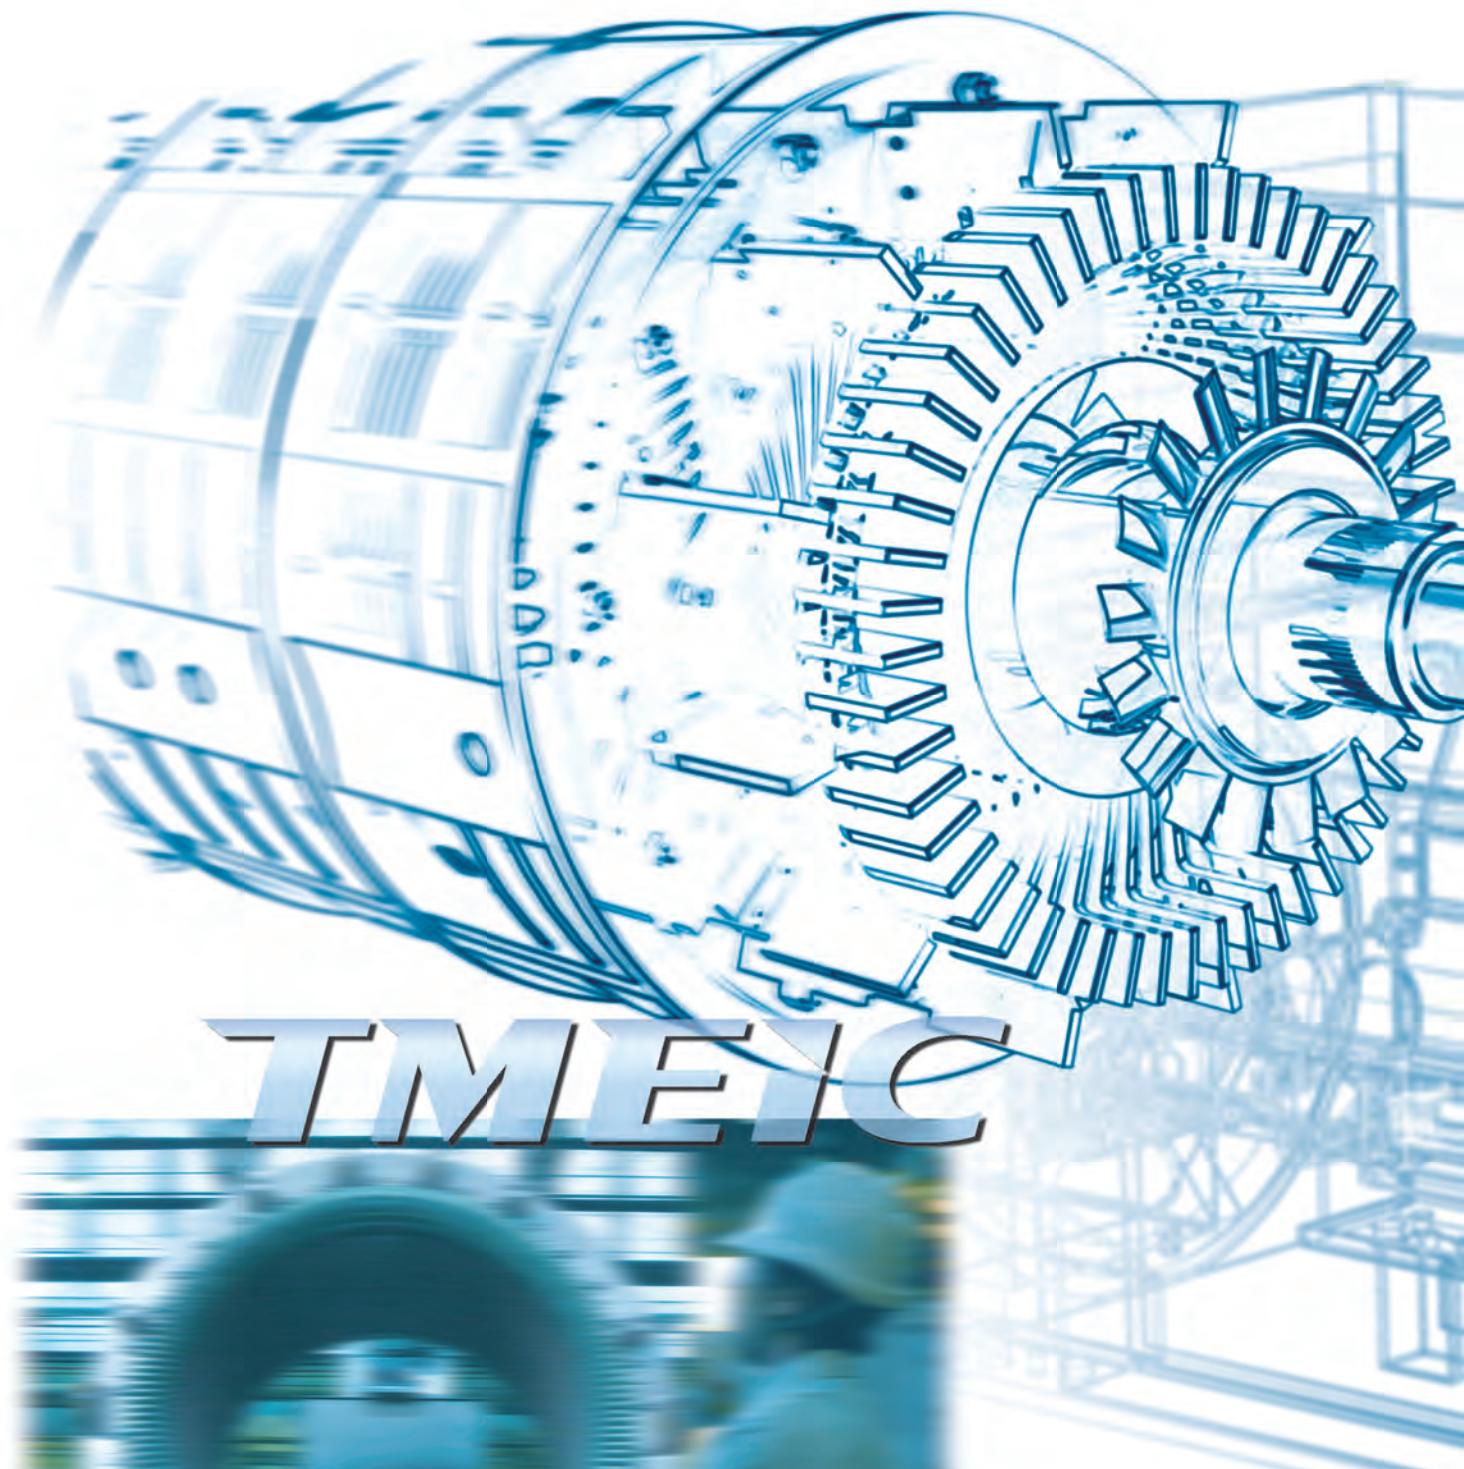

Water-cooled motors

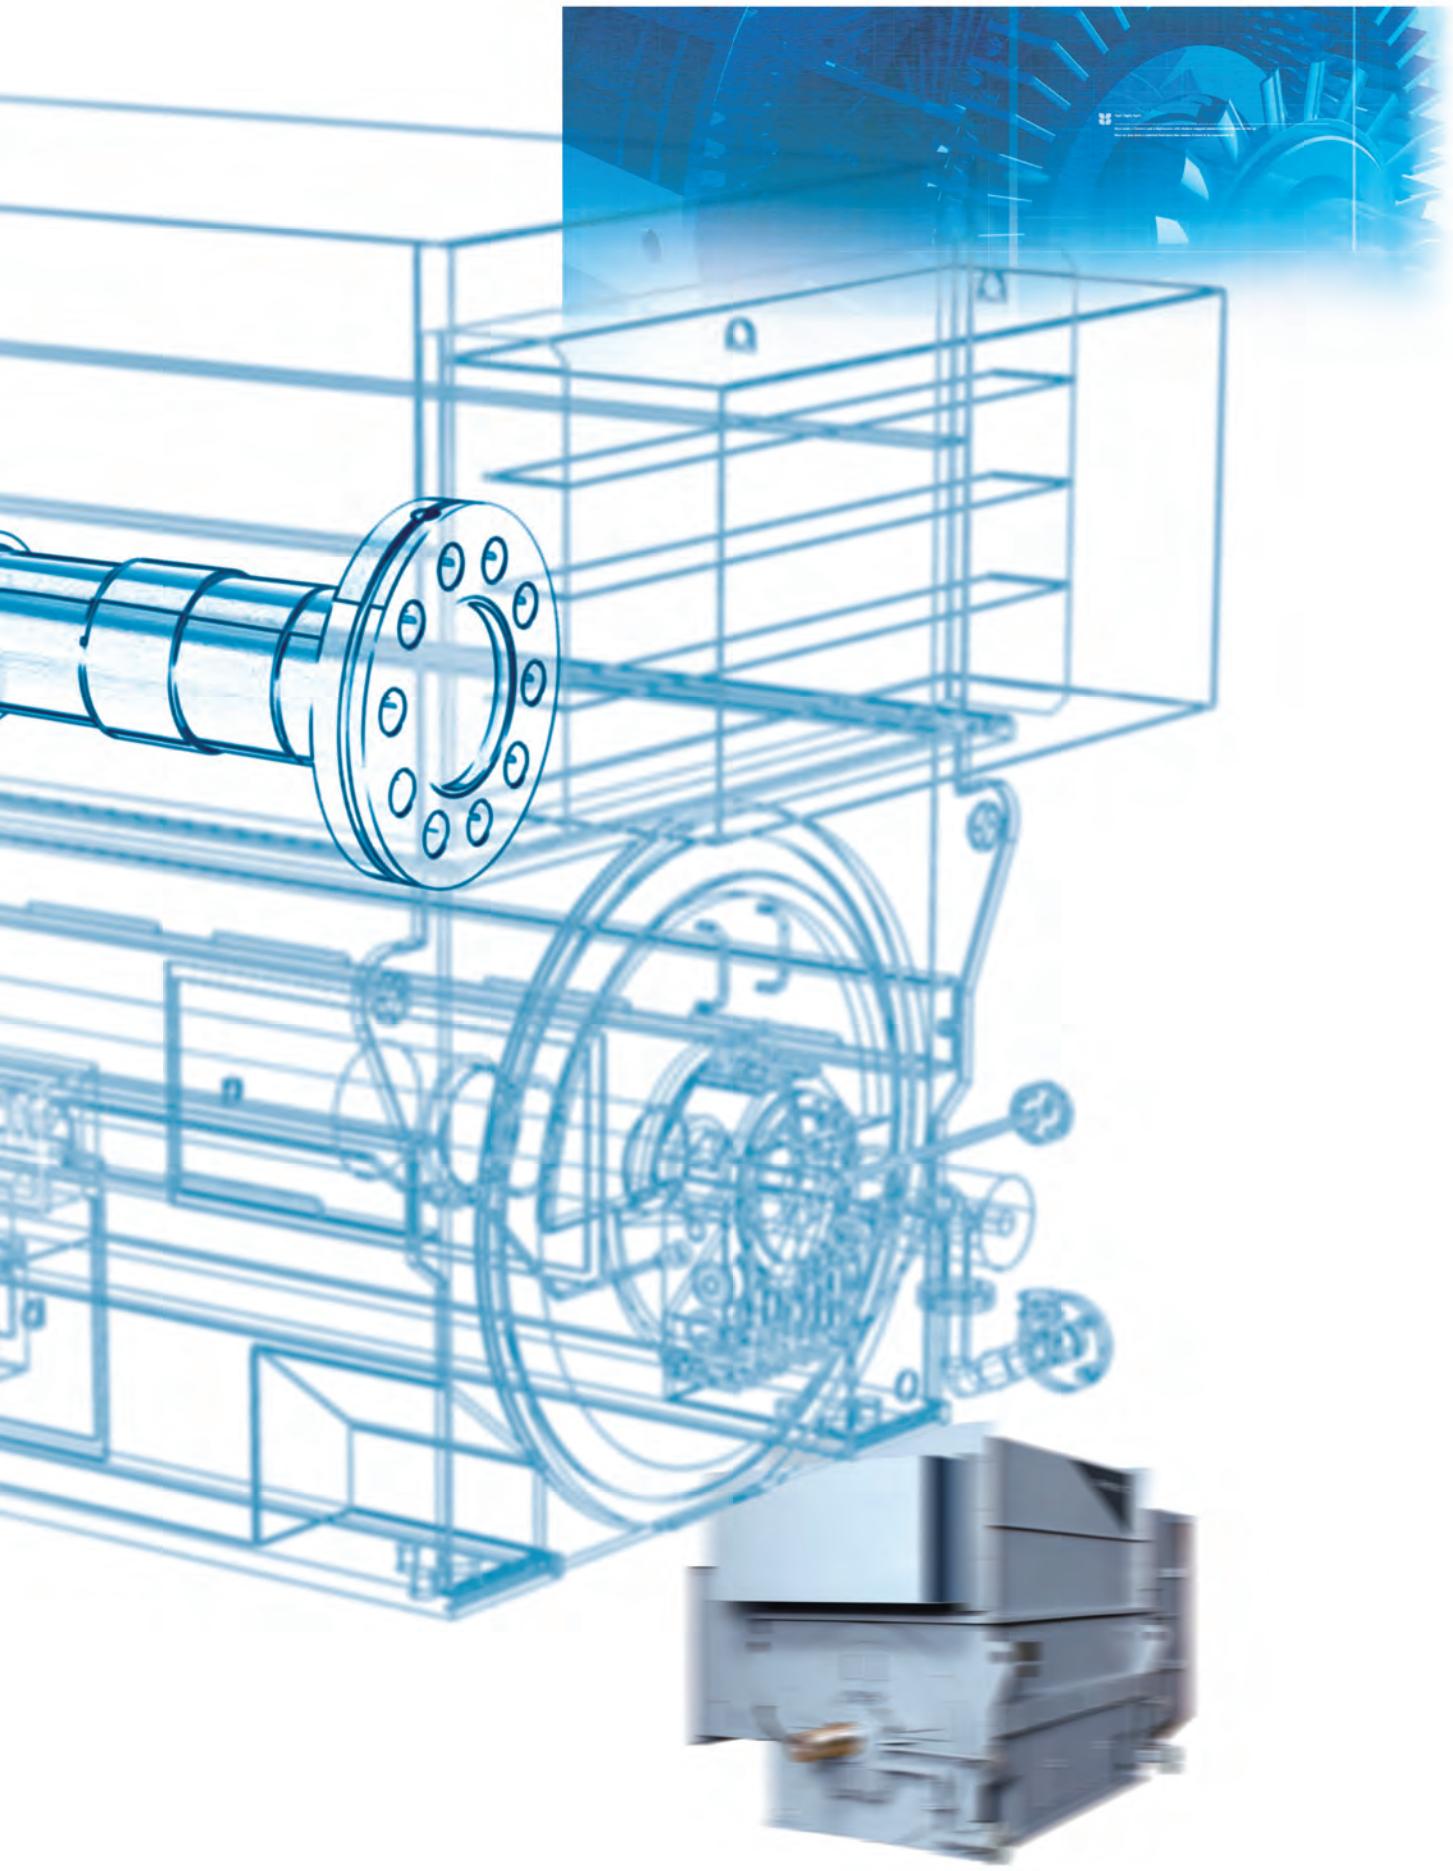

#### ■ Technical data

##### IC81W (TEWAC), Exe

Rated voltage	up to 11kV
Rated frequency	50/60Hz
Motor type	Induction motor with squirrel-cage rotor
Type of construction	IM B3/IM V1
Degree of protection	IP55
Type of protection	Exe
Hazardous area classification	Zone 1, 2
Cooling method	IC81W
Stator winding insulation	Thermal class 155 (F), utilized to 130 (B)
Shaft height	400 to 630mm
Bearings	Antifriction/Sleeve
Cage material	Copper
Frame material for shaft height 400 to 630mm	Frame: Steel Top cover: Steel
Tube material for air cooler	Deoxidized copper
Standards	IEC, EN, JEC
